

Forza Horizon 6 — Best Cars by Tier & Discipline

Launch-window meta cheat sheet (game released May 19, 2026 · compiled ~9 days post-launch)

⚠ Read this first — what this guide is and isn't

This is a launch-window snapshot, not a settled meta. Every credible source (PC Gamer, Game8, IGN via grindout, etc.) explicitly states the FH6 meta is *still forming* and rankings will shift over the coming weeks as players grind and post tunes. Treat this as your strong starting garage.

On tune share codes: I have deliberately **not** included share codes. Here's the honest reason — working codes live *inside* FH6's in-game share marketplace, not on the open web. The sites currently advertising "FH6 tune codes" are largely auto-generated and the strings either fail to load, are recycled Forza Horizon 5 codes (a different game; codes don't transfer), or are invented. Rather than hand you 90 fake strings, the **Tuning section at the end teaches you to build or find working tunes in-game in under a minute** — which is both reliable and future-proof as the meta shifts.

Class system note: FH6 uses **D, C, B, A, S1, S2, and the new R-Class**. There is no "X tier" (that was FH5's X-class; R-Class replaces it). R sits at the top and is reserved for track prototypes and factory race cars — it's a different niche, not just "stronger S2."

Confidence key:

- **Strong** — multiple independent reputable sources agree (e.g. PC Gamer hands-on + Game8 + others)
 - **Moderate** — appears across guides but with some disagreement or single-source weighting
 - **Tentative** — early/contested; verify in-game before committing credits
-

Quick-reference matrix

PI bands: **D** 100–500 · **C** 501–600 · **B** 601–700 · **A** 701–800 · **S1** 801–900 · **S2** 901–998 · **R**

Discipline	R / S2 (top end)	S1	A	B
Road / Street	Ferrari FXX-K Evo (R) ● · Mercedes-AMG One (S2) ●	Nissan GT-R NISMO 2024 ●	Toyota GR Supra 2020 ●	VW Golf R / retro JDM ●
Drag / Top speed	Nissan GT-R R35 Black Ed. FE ● · Koenigsegg Jesko (top speed) ●	Porsche 911 Turbo S ●	tuned AWD coupe ●	—
Drift	Lotus Evija FE (S2) ●	Formula Drift #151 GR Supra ●	Nissan Silvia Spec-R ●	AE86 Trueno FE ●
Dirt / Rally	(rally conversion needed) ●	Ford #4 Focus RS ●	Subaru BRZ FE ●	Impreza WRX STI / Lancer Evo VIII ●
Cross-country	Dodge Viper FE ●	Viper / BRZ FE ●	Mercedes X-Class ●	Ford F-450 (D-B) ●

ROAD & STREET RACING

Road races = closed tracks, tight/technical. Street races = open Tokyo roads with traffic, reward launch + recovery. Touge = downforce + handling over straight-line speed.

R-Class (top tier)

1. **2018 Ferrari FXX-K Evo** ● — The cleanest R-Class consensus pick (Game8 + IGN + PC Gamer all converge). Remarkable stock speed, handling, and braking; only improves with tuning. ~4,500,000 CR Autoshow (also a Welcome Pack version). Be careful on tight tracks — the power can overwhelm you.
2. **2023 Aston Martin Valkyrie** ● — One of the fastest cars in the game at top speed (default 9.2 rating), handles well tuned. Weakness: slow acceleration vs the Ferrari. ~2,750,000 CR.
3. **2013 McLaren P1** ● — Lightning top speed for road/street; comparatively slow

acceleration, so weaker on very twisty courses. ~1,550,000 CR.

S2-Class

1. **2021 Mercedes-AMG One** 🟡 — Tops S2 with a perfect 10 acceleration; active aero makes it dominant on technical high-speed circuits. The meta S2 road pick across multiple tier lists.
2. **2025 GR GT Prototype (Toyota)** 🟢 — PC Gamer's single favorite car; cover car. Slick tyres + widened track = exceptionally planted. Only ~250,000 CR — the standout value pick. (Note: listed under "GR," not Toyota, in-game.)
3. **2020 Koenigsegg Jesko** 🟡 — Leads S2 in raw top speed; best for long straights/speed zones, needs careful tuning to corner.

S1-Class

1. **2024 Nissan GT-R NISMO** 🟢 — The go-to S1 pick. AWD traction, ~600 hp, quick off the line — ideal for bend-heavy tracks. ~270,000 CR, or via Touge & Street Rivals milestones. Base game, no DLC.
2. **2023 Porsche 911 GT3 RS** 🟢 — Quintessential street racer. Not the highest top speed but very zippy; slicks + wider base makes it perfect for tight tracks. ~260,000 CR.
3. **2023 Porsche 911 Turbo S** 🟡 — 10 launch stat, strong accel; accessible and tunable. ~275,000 CR.

A-Class

1. **2020 Toyota GR Supra** 🟡 — Cleanest modern-JDM A-Class pick; the most flexible/adaptable platform (road, drift, even cross-country). The workhorse class — a well-tuned A car can punch into S1 events.
2. **2020 BMW M2 Competition Coupé** 🟡 — More traditional A option with better speed/handling balance.
3. Various European retros / classic JDM tuners — A-Class rewards build flexibility.

B-Class

1. **2021 Volkswagen Golf R** 🔴 — Cited as the strongest AWD all-rounder for B-Class road. (Early/single-weighted — verify.)
2. **1969 Toyota 2000GT** 🔴 — Standout B-Class pick, but it's a **Barn Find** (must be located).

3. Hot hatches / classic JDM coupes broadly dominate B — themed-event territory.
-

DRAG & TOP SPEED

Drag = launch + acceleration + gearing. Top speed = different tune (longer final drive). AWD is near-mandatory off the line.

Source conflict flagged: Skycoach & community say the **GT-R R35 FE** is the top drag car; GAMES.gg argues the **Mazda MX-5 Miata FE**; one low-quality site (xmodhub) claimed "Rimac Nevera / McLaren F1 GT" with fabricated "telemetry" — disregard that one. Consensus below.

S2 / Top end

1. **2012 Nissan GT-R Black Edition (R35) "Forza Edition"** 🟢 — The consensus fastest drag car. Pre-tuned AWD with drag tyres + drag chute, S2 ~850, 10/10/10 speed/accel/launch. Quarter-mile in ~6 s. Catch: it's a Forza Edition — **Wheelspins / Auction House only**, not in the Autoshow. Near-uncontrollable in corners; straight-line only.
2. **2020 Koenigsegg Jesko** 🟡 — Top-speed king for speed-trap/half-mile pulls.
3. **Hennessey Venom F5** 🟡 — Raw-power top-speed pick (community clocked 315+ mph); less forgiving than the GT-R FE.

Budget / lower-class drag

- **1994 Mazda MX-5 Miata FE** 🟡 — Best *accessible* drag pick; lightweight AWD, S2 ~850. ~450–500k CR. Get accel + launch to 10 via tune.
 - **1998 Toyota Supra RZ** 🟡 — Cheapest credible drag starter.
-

DRIFT

Front-engine + RWD + drift tyres. AE86 for tight touge (Mt. Haruna); Formula Drift cars for highest open-zone scores.

S1 / top end

1. **2020 Formula Drift #151 Toyota GR Supra** 🟢 — Can't go wrong; wants to glide and smoke even stock, better tuned. ~185,000 CR. Formula Drift cars outperform anything a B-class build manages.

2. **Lotus Evija "Forza Edition"** 🟡 — Cited as the S2 drift specialist (electric instant torque). Wheelspin-exclusive — keep grinding.
3. **Formula Drift #64 Nissan Z** 🟡 — Scores high, holds angle, less twitchy than electric drift cars — good for beginners.

A / B / entry

1. **2002 Nissan Silvia Spec-R** 🟢 — Unassuming but swings around corners with a strong engine + wide drift tyres; clears most challenges. ~44,000 CR.
2. **2022 Mazda MX-5 Miata RF** 🟢 — RWD, well-balanced, loves to go sideways and chains drifts without spinning. ~29,000 CR. Any MX-5 works.
3. **Toyota AE86 Sprinter Trueno (FE variant, B-Class)** 🟡 — The "correct" car for Mt. Haruna touge by physics (~980 kg, high-revving). Tune: stiff rear springs, rear toe-out, 1.5-way/open LSD — keep power *secondary*.

Alternates PC Gamer notes: 1994 Nissan Silvia K's, 1998 Toyota Supra RZ, late-2010s Camaro for style.

DIRT / RALLY

Fully off-road. Rally/off-road tyres. Lower classes are flexible; higher classes need full rally conversions.

A-Class

1. **2022 Subaru BRZ "Forza Edition"** 🟢 — Perfect 10 off-road rating; a beast in both dirt and cross-country when tuned. **Not in Autoshow** — get it from the Aftermarket spot at the Sotoyama Ski Resort.
2. **2001 Ford #4 Focus RS (rally)** 🟡 — PC Gamer's default: scrappy, high speed + accel + off-road handling. ~415,000 CR.

B-Class (best value)

1. **2004 Subaru Impreza WRX STI** 🟢 — Iconic, dirt-cheap (~30,000 CR), general stat spread with headroom before hitting A-rank.
2. **2004 Mitsubishi Lancer Evolution VIII MR** 🟢 — Near-identical to the Impreza, slightly higher stats across the board. ~30,000 CR. Welcome Pack version comes pre-tuned to A-rank.

Higher classes

- Most top dirt cars above A need a **full rally conversion** first (the best high-class cars aren't rally cars by default). The Exige WTAC or MX-5 FE can cross over if the race allows.
-

CROSS-COUNTRY

Mostly off-road with short tarmac stretches — needs suspension, stability, durability. (Per Game8's class breakdown.)

S1+

1. **Dodge Viper "Forza Edition" / Viper GTS ACR FE** 🟢 — Best S1+ cross-country car: incredibly fast and lightweight, nothing comparable right now. Catch: **Premium edition / VIP only**. Free alternative → Subaru BRZ FE.

A-Class

1. **Mercedes-Benz X-Class** 🟡 — Generally the best A-Class CC pick; consistent across all CC track types.

D-B Class

1. **Ford F-450 (Super Duty)** 🟢 — Best choice for any race in D-B; consistent across all cross-country tracks.
 2. **2023 Ford F-150 Raptor R** 🟡 — Ugly handling on paper but huge power (and great for ramming). Tune handling first, then top speed. ~110,000 CR.
 3. **2025 Toyota Land Cruiser** 🟡 — Reliable all-terrain; tune up accel + braking for bendy tracks. ~70,000 CR.
-

HOW TO TUNE (the reliable alternative to fake codes)

FH6 rebalanced the classes, so **old Forza tunes can't be imported** — you build from scratch. Two paths:

Path A — Find a working tune in-game (30 seconds)

1. Buy/own the car → **Cars** tab → **Upgrades & Tuning**

2. **Find Tuning Setups** → **Search** (Backspace on PC)
3. Filter by **event type** (drag / drift / rally / road) and sort by **most downloaded / highest rated**
4. Download, test, keep if it suits the event. This is where real, current codes live — and they update as the meta shifts.

Path B — Tune it yourself (the new FH6 system)

Install adjustable “Race” parts first (Race Suspension, Race Diff, tunable gearbox) or the sliders stay locked. Then **change ONE setting at a time and test on the same stretch of road** — this is the golden rule every guide repeats.

New mechanic — Mechanical Balance stat (confirmed across multiple sources 🟢): a live front-vs-rear grip readout.

- **Target 0.55–0.65, sweet spot 0.60** for road racing.
- Adjust it primarily with **anti-roll bars**. Rule: *soften the end with the problem; don’t stiffen the strong end.*

Recommended tune order: Tires → Springs → Ride Height → Alignment → ARBs → Damping → Brakes → Differential → Aero → Gearing.

Baselines by discipline:

Setting	Road/Grip	Rally/Off-road	Drift	Drag
Tire pressure	Slicks 30–33 PSI; street/rally 26–28	22–27 PSI	Front near max, rear low (rear spins easier)	Drag tyres, low for launch
Springs/ARBs	Stiffer, balanced	Soft, near minimum	Stiff rear	—
Ride height	Low	Higher (5–7 in, off bump stops)	Low	Low
Alignment	–1.5 to –2.5° front camber, slight front toe-out	Softer	Max front camber, rear ~0, toe-out front	Minimal

Differential	~65% accel / 15% decel RWD; AWD ~70% rear	Drop ~10% vs race; center 60–70% rear	Locked on accel (drift diff)	Tuned for hard launch w/ controllable wheelspin
Brake balance	Slight forward	—	Forward (brake mid-drift w/o snapping)	—
Gearing	Shorter final drive (mountain/city); longer (straights)	Shorter	Tune last on a straight	Top gear long; 1st iteratively on the strip

Universal tips (cross-source 🟢):

- **Upgrade brakes + front tyre width BEFORE adding power** — they move the needle more than in past Forzas.
- Tyre-pressure changes are subtle but cumulative; a 3 PSI shift transforms behavior.
- Sliding in corners? Drop rear pressure 1–2 PSI before touching suspension.
- Japan's map is *vertical* — corner-exit cars beat raw-horsepower cars on the touge.
